1. Introduction WHMCS SIDN Module

First of all, thank you for purchasing our WHMS SIDN Module. With this module you can manage your .nl domain names through your WHMCS admin panel. After installed this module you'll be able to control directly the following options from your WHMS regarding the .nl domain names registered at the Dutch SIDN registrar.

Note: Since the templates differ between WHMCS <8 and >8, the illustrations and links of this user guide may differ.

1.1 Functions WHMCS SIDN Module

- Register domain names
- Domain name transfer/cancel/renewal
- Provide EPP Code
- Reseller support
- Managing DNSsec records
- Managing DNS Settings (coupling with PowerDNS)
- Changing Name Servers
- Automatic Name Server change after incoming transfer
- Change contact information (holder / tech / admin)
- Set contract period (1, 3 or 12 months)
- SIDN order period info, domain name date info

Before you start following this user guide, check if the WHMCS SIDN Module version number of this user guide matches with your installed WHMCS SIDN module version number.

- version user guide: see bottom frontpage of this document.
- version WHMCS SIDN Module: WHMCS panel ► system settings ► domain registrars.

1.2 System requirements

System requirements:

- | | |
|--|-----------------------|
| ► WHMCS installation | ► PHP 7.4 and PHP 8.1 |
| ► Tools4ISP module (free addon) | ► PHP MySQLi |
| ► PowerDNS (only if used Managing DNS) | ► MySQL (5+) |
| ► Ioncube loader (only v12.0) | |

This module is fully tested with WHMCS v8.8 and PHP v8.1 (from Debian, with Zend OPcache). The modules might work with other versions, however we can't really support it in dept and we can't guarantee it.

2. Other registrar modules

Other registrar modules that tools 4 ISP provides for WHMCS can be ordered at www.tools4isp.com

- WHMCS Registrar module for SIDN
- WHMCS Registrar module for DNS.be
- WHMCS Registrar module for RRPproxy
- WHMCS Registrar module for Donuts
- WHMCS Registrar module for EURid
- WHMCS DNS Module
- WHMCS Custom modules
- WHMCS Multisite
- WHMCS Statistic

3. Installation WHMCS SIDN Module

Before you start the installation first collect the following required information:

- SIDN User name (The user name is your registrar ID, normally 6 digits, starting with a 3)
- SIDN Password
- SIDN Host name (drs.domain-registry.nl)
- SIDN Port number (700)
- SIDN handles (contact handles)
- License key of WHMCS SIDN module
- Verify your server is allowed to connect to drs.domain-registry.nl via EPP

If used DNS (PowerDNS) you'll need the following information:

- MySQL DNS user name
- MySQL DNS Password
- MySQL DNS Host name
- MySQL DNS Database name

If used DNSsec you'll need the following information:

- MySQL DNSsec user name
- MySQL DNSsec Password
- MySQL DNSsec Host name
- MySQL DNSsec Database name

ⓘ Before installing the WHMCS registrar Module, make sure the required tools4ISP addon is installed first!

3.1 Upload/Install the required Tools4ISP add-on

The Tools4ISP is a separated module that is required to run the WHMCS SIDN module. It contain several configuration settings and handles your license. Without the Tools4ISP module the WHMCS SIDN module will not work. You can download the Tools4ISP module free at your Tools4ISP client area. For installing and step-by-step instructions, see the separate manual for Tools4ISP.

3.2 Upload the WHMCS SIDN Module

Download and extract the WHMCS SIDN Module from your Tools4ISP client area:

<https://my.tools4isp.com>

Upload the extracted files in your WHMCS installation in:

<WHMCS root>/modules/registrars/sidn/

Add the language override files (located in lang/overrides) in <WHMCS root>/lang/overrides/. If there is already a file you might want to combine them.

Move all other files to: **/modules/registrars/sidn/**

If files exists, choose overwrite files.

ⓘ Before updating the WHMCS registrar Module, always make a full backup (files and database) and read carefully the release notes.

3.3 DNSsec and nameserver database preparation (if used)

DNSsec and PowerDNS as nameserver:

If used DNSsec support in combination with powerDNS, add the required DNS rows to your PowerDNS database by running the following MySQL file (use the config from your database):

<https://github.com/tools4isp/dnsshop/blob/master/powerdns.sql>

After you've added the rows run the following scripts (and use the config from your database):

<https://github.com/tools4isp/dnsshop/blob/master/cron/pdnssec-pushdnssec.php>

<https://github.com/tools4isp/dnsshop/blob/master/cron/pdnssec-rectify.php>

DNSsec and other nameserver:

If used DNSsec in combination with another nameserver, use the following code to add the required tables to your database:

```

CREATE TABLE `domains` (
  `id` int(11) NOT NULL,
  `name` varchar(255) NOT NULL,
  PRIMARY KEY (`id`),
  KEY `name_index` (`name`)
) ENGINE=InnoDB DEFAULT CHARSET=latin1 AUTO_INCREMENT=1 ;

CREATE TABLE IF NOT EXISTS `dnssec` (
  `id` bigint(255) NOT NULL auto_increment,
  `domainid` int(255) NOT NULL,
  `type` varchar(10) default NULL,
  `record` varchar(255) NOT NULL,
  PRIMARY KEY (`id`),
  KEY `domainid` (`domainid`,`type`)
) ENGINE=MyISAM DEFAULT CHARSET=latin1 AUTO_INCREMENT=1 ;

```

Insert example data for DNSsec

```
INSERT INTO `domains` (`name`) VALUES ('tools4isp.example');
```

The id from the 'domains' table must match the 'domainid' from the dnssec table below (in this example 1):

```
INSERT INTO `dnssec` (`domainid`, `type`, `record`) VALUES (1, 'DNSKEY', '257 3 8
AwEAAZWXYfFaRuz6yMX/68ZuFHSYuoS0eXyKcl4acRe/cqicfuhulVoCwkPE3LBVA/KhNieztaPNEhLIVIOQIAuG6JyYc9d
pCGXTUW8iqf8oagHiRTsVa+td+HGQ6vG0wSfW7nzLaq1ras/8EUxc+b5uUhRyzk16ORb2k/WrPzggjyVkfqpRPX5nvxmys
RF7KQFIPGswDcpKhVQKQNBwCEL3GZoMJU9g0j2UuCBhw8T81ERTtq4t6U8Vbn0M/07g1YsyGaMVgNltrFM91pUX3ff7
hcka01b1hRv+7yBtXLQ66MsN5rpsrRZu2VoqhaGQJx5ENm4UjF+0CjW3r7HTU7M00= ; ( RSASHA256 ));
```

```
INSERT INTO `dnssec` (`domainid`, `type`, `record`) VALUES (1, 'DS', '14960 8 1
bf33d879a15ea65449360d1a46754160c460c9f1 ; ( SHA1 digest ));
```

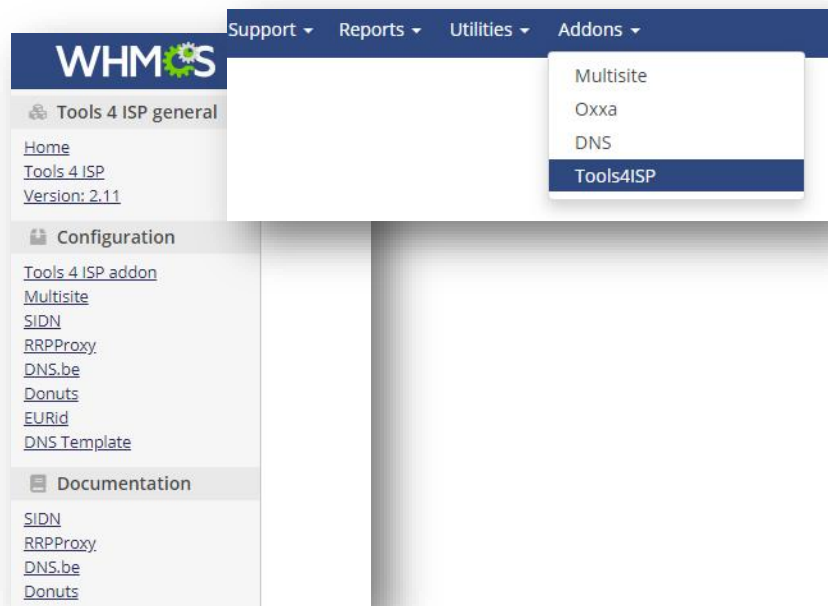

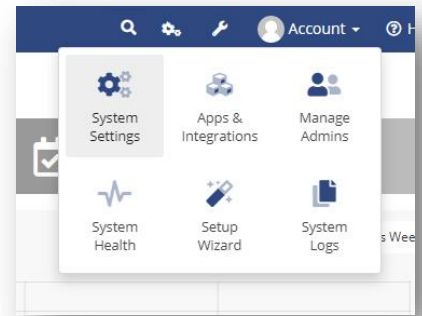

```
INSERT INTO `dnssec` (`domainid`, `type`, `record`) VALUES (1, 'DS', '14960 8 2
d068ffb7dc44406d34e872ce15ace9e48ba47167b0c738c6e946a5c9595d0320 ; ( SHA256 digest ));
```

3.4 Configure the WHMCS SIDN Module

To enable the registrar module, login to your admin area and click the  icon: "System Settings".
Select in the list **Domain registrars**.

Here you'll see a list of registrars.
Find the **SIDN** registrar module and click on the button "Activate".

Click in the menu tab Addons and select the Tools4ISP addon.
On the left menu click SIDN (configuration section)

User name	<input type="text"/>
Password	<input type="password"/>
Host name	<input type="text"/>
Port number	<input type="text"/>
License key	<input type="text"/>
MySQL DNS user name	<input type="text"/>
MySQL DNS Password	<input type="password"/>
MySQL DNS Host name	<input type="text"/>
MySQL DNS Database name	<input type="text"/>
DNS account list	<input type="text"/>
DNS standard TTL	<input type="text"/>
Supported DNS record types	<input type="text"/>
Standard value for account field in PowerDNS database	<input type="text"/>
MySQL DNSsec user name	<input type="text"/>
MySQL DNSsec Password	<input type="password"/>
MySQL DNSsec Host name	<input type="text"/>
MySQL DNSsec Database name	<input type="text"/>
Your tech handle	<input type="text"/>
Handle to use for registrations if contact is wrong	<input type="text"/>
Your billing handle	<input type="text"/>
Handles (split by a ,) that cannot be updated from within WHMCS	<input type="text"/>
Fallback phone number	<input type="text"/>
Cache time, set to -1 to disable cache	<input type="text"/>
Allow SFTP access to SIDN to get latest CSV files	<input type="checkbox"/>
File name within ssh directory in module directory where ssh private key is located	<input type="text"/>
Force mail address	<input type="checkbox"/>
Mail address to force	<input type="text"/>
Enable DNS support	<input type="checkbox"/>
Enable DNSsec support	<input type="checkbox"/>
Enable reseller support	<input type="checkbox"/>
Enable DebugMode - show data	<input type="checkbox"/>
Enable DebugMode2 - send data to Tools 4 ISP	<input type="checkbox"/>
Enable logging - log requests to a file	<input type="checkbox"/>
Create DNS zone after registration and transfer	<input type="checkbox"/>
Default registraron period	<input type="text" value="12"/> ▼
Default renew period	<input type="text" value="12"/> ▼
Default period after transfer	<input type="text" value="12"/> ▼

Detailed info for the input fields:

User name	your SIDN username	
Password	your SIDN password	
Host name	SIDN hostname	(drs.domain-registry.nl)
Port number	700	
License key	the license key from tools4ISP	
MySQL DNS user name		only if used DNS like PowerDNS
MySQL DNS Password		only if used DNS like PowerDNS
MySQL DNS Host name		only if used DNS like PowerDNS
MySQL DNS Database name		only if used DNS like PowerDNS
DNS account list	*	only if used DNS like PowerDNS
DNS standard TTL	900	only if used DNS like PowerDNS
Supported DNS record types	AAAA,CNAME,NS,A,MX,TXT,P TR,SRV,CAA,TLSA,DS	All supported PowerDNS record types are supported
Standard value for account field in PowerDNS database		
MySQL DNSsec user name		required for DNSsec automation
MySQL DNSsec Password		required for DNSsec automation
MySQL DNSsec Host name		required for DNSsec automation
MySQL DNSsec Database name		required for DNSsec automation
Your tech handle	a SIDN Handle	Handles (split with a comma ,) that cannot be updated from/within WHMCS
Handle to use for registrations if contact is wrong	a SIDN Handle	Handles (split with a comma ,) that cannot be updated from/within WHMCS
Your billing handle	a SIDN Handle	Handles (split with a comma ,) that cannot be updated from/within WHMCS
Fallback phone number		optional
Cache time	3600 (cache time for module)	set to 0 to disable cache
Allow SFTP access to SIDN to get latest CSV files	set this option to activate	
Filename within ssh directory in module directory where ssh privat key is located	set this option to activate	
Force mail address	set this option to activate	
Mail address to force	a valid mail address	
Enable DNS support	set this option to activate	optional
Enable DNSsec support	set this option to activate	optional
Enable reseller support	set this option to activate	optional
Replace nameservers after transfer	Current DNS will be used by default	
Enable Debug Mode	set this option to activate	All communication with SIDN will be visible on screen including passwords (disable this setting in production).
Enable DebugMode2	set this option to activate	All communication with SIDN will be sent to tools4ISP including passwords (disable this setting in production).
Enable logging	set this option to activate	log requests to a file
Create DNS zone after registration and transfer	set this option to activate	optional
Default registration period	set a number of months	
Default renew period	set a number of months	
Default period after transfer	set a number of months	

After filling out the required fields , click on "**Save configuration**"

4. Update the WHMCS SIDN Module

When update the WHMCS SIDN module (or WHMS), always read carefully the release notes. By update WHMCS SIDN, check also the needed Tools4ISP module. Only the updated files will be overwritten (your current settings will not be overwritten).

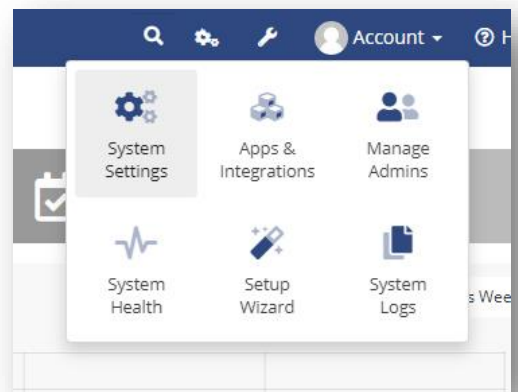

Updates from 2.0 and earlier, please contact Tools4ISP support team.

4.1 Update WHMCS

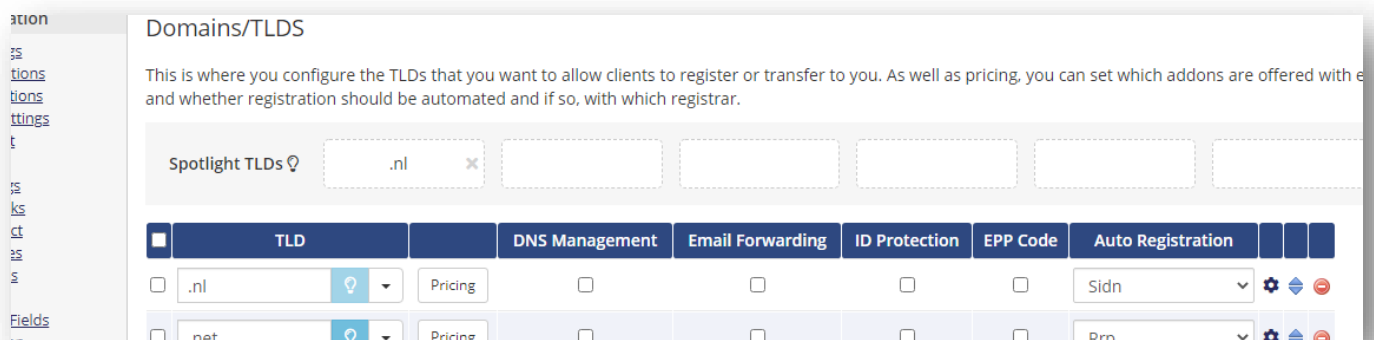

Before update WHMCS always check whether the SIDN module is compatible with the version of WHMCS. Preferably switch off the automatic updating option of WHMCS.

5. Setup registrar for .nl extension

For coupling the .nl extension to SIDN you'll have to set up the section "Domain Pricing"., login to your admin area and click the  icon: "System Settings".
Select in the list **Domain pricing**.

Set the TLD .nl extension and the dropdown to "SIDN" under Auto Registration as below:

Again, don't forget to set the pricing.

6. Extra Options

Once you installed the WHMCS SIDN module, and you'll open the details of any .nl domain name you'll see an extra block with additional options (depending on the domain status):

Registrar Commands [Register](#) [Transfer](#) [Renew](#) [Modify Contact Details](#) [Get EPP Code](#) [1 month](#) [3 month](#) [Move to quarantine \(cancel\)](#)

Most of the buttons of the **Registrar Commands and Management Tools** speak for themselves and don't need too much explanation, however here some extra info:

- SIDN does not support "Registrar lock"
- SIDN does not support "ID Protection"
- SIDN does not support "Renew" (only WHMCS)
- The Dutch registry(SIDN) calls the "EPP Code" a "TOKEN".
- 1, 3 and 12 months is the billing cycle for a domain name. The actual status you can see the under "Order period".
- Move to quarantine is the way to cancel a domain name.
- The button "Delete cache" refreshes the cache of this domain name from WHMC **Special Options**

* Registrar command buttons are only visible when the specific option is available.

If you've set coupled PowerDNS, you can manage the DNS for this domain name directly here. If you've set/enabled the DNSsec settings for you can manage the DNSsec directly here.

NOTE: SIDN supports only the DNSKEY (and not DS). Select "Activate DNSSEC when available, I give the DNSKEY record (s)" and use the first (top) field for the DNSKEY.

If you've set/enabled the Reseller settings for you can manage the resellers info directly here.

6.1 SFTP connection with SIDN

To download files automatically from SIDN you can use this function. You can configure it from within WHMCS (see the paragraph "Configure the WHMCS SIDN Module" for more information about this). Create a SSH key and upload it to SIDN (the public key), after it is ready move the private key to WHMCS_ROOT/modules/registrars/sidn/ssh/. Don't set a password on this key.

After the SSH key is set for at least 24 hours (SIDN needs some time to process it) you can run:

```
php WHMCS_ROOT/modules/registrars/sidn/sidn_get_csv.php
```

There is no reason to do this more than once a day normally. It will download all .csv.zip files from SIDN and save them in WHMCS_ROOT/modules/registrars/sidn/sftp/

If you extract the files you want/need you can move the newest *_UNATTACHED_HANDLES.CSV file to one directory up to use it with "Clean up unused handles at SIDN", after doing this you can start with the next paragraph.

The comparesidn option for the "SIDN Synchronization" assumes you did just run the command with sidn_get_csv.php so it can find the required files for this comparison.

6.2 Clean up unused handles at SIDN

To clean up the unused handles at SIDN, Tools4isp has created a script. To use this you must first get an export of the unused handles from SIDN. This can be found at the following place:

1. Login to the SIDN registrar web interface
 - 1.1. Navigate to "Tools & reports"
 - 1.2. Navigate to "DRS-reports"
2. Download "unattached handles"
3. Extract the zip file and rename the CSV file to UNATTACHED_HANDLES.CSV
4. Upload this file to WHMCS_ROOT/modules/registrars/sidn/
5. Run from the command line:
php WHMCS_ROOT/modules/registrars/sidn/sidn_clean_old_handles.php
6. Remove UNATTACHED_HANDLES.CSV or do a chmod 000 (it is in a place where it could otherwise be downloaded in theory)

Replace WHMCS_ROOT with the actual root of WHMCS or go to the appropriate folder.

While running the script you'll see a message on the screen for each deleted handle

6.3 Configure Multiple WHMCS installations with 1 SIDN account

If used multiple WHMCS installations you can use just 1 SIDN account to process the transfer(out) domain names. So if you're using multiple WHMCS installations you have to configure the variables in the following file:

WHMCS_ROOT/modules/registrars/sidn/multiple_install.php

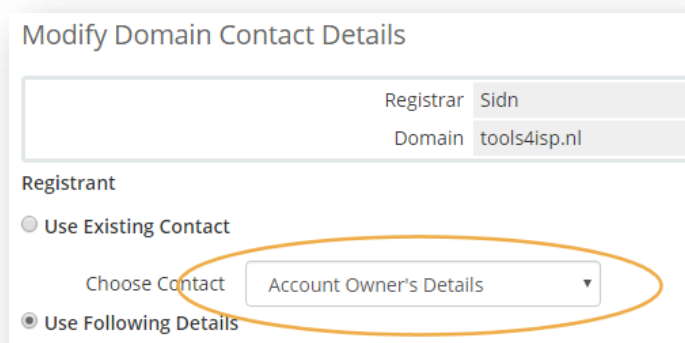

Also, the poll / pollcancel option should only be added to the cron of the main installation where you have set this file (see section 8).

8. Use of Modify Domain Contact Details

If you disturb the dropdown width (not fully visible), you can add the following lines at the end of your CSS from the admin template(by default: /admin/templates/blend/style.css).

Note: This little bug is a WHMCS issue.

```
.Registrantdefaultwhois .Admindefaultwhois .Techdefaultwhois {  
    min-width: 100%;  
    margin-left: 15px;  
}
```

Modify Domain Contact Details

	Registrar	Sidn
	Domain	tools4isp.nl

Registrant

☐ Use Existing Contact

Choose Contact Account Owner's Details ▼

☒ Use Following Details

8.1 Special field properties

The **Name** field (modify domain contact details) can be the first/last name or the organization name. At SIDN you cannot fill in both names. It's either a Name (Natural Person) or an Organization (Company).

Registrant	Admin	Tech
<input type="radio"/> Use Existing Contact	<input type="radio"/> Use Existing Contact	<input type="radio"/> Use Existing Contact
Choose Contact <input type="text" value="Account Owner's Details"/>	Choose Contact <input type="text" value="Account Owner's Details"/>	Choose Contact <input type="text" value="Account Owner's Details"/>

<div>Save Changes Go Back</div>		

9. SIDN Synchronization

Create a cronjob that runs regularly (for example daily), and which has 1 or more of the supported options. The cron to run can be found in the following file:

WHMCS_ROOT/modules/registrars/sidn/sidn_sync.php

The current options are:

Compare	To compare WHMCS with SIDN and if dates are different or domains are missing at the other location it will provide information.
comparesidn	To compare the CSV file from SIDN with the domains in WHMCS to see if you are something missing in WHMCS.
dates	When combined with compare the dates in WHMCS will be updated with the dates (expiry and next due and next invoice) from SIDN.
disableautorenewduedomain	Disable auto renew for domains when not all invoices are paid by the due date from SIDN.
dnssec	Enable dnssec on the required domains as set in the dnssec table, it has to be in the DNSsec table as configured in the module configuration.
dnssecbydef	Enable dnssec by default, if a domain is not in the dnssec table it will be added before signing the domain.
expirydates	When combined with compare the expiry date in WHMCS will be updated with the dates from SIDN.
fixexpired	Update dates and set domains to Active if exists at SIDN and invoices are paid.
fixwrongdates	If a date is 0000-00-00 in WHMCS update WHMCS with the date from SIDN.
noverbose	To disable output from the script (possible except PHP errors, depending on WHMCS/your PHP configuration).
planneddelete	If a date is 0000-00-00 in WHMCS update WHMCS with the date from SIDN
poll	Poll and process messages from SIDN.
pollcancel	If a poll is done cancel domains that aren't at SIDN after a transfer (outgoing transfers, poll is also automatically added).
remove	Drop domain at SIDN if autorenew is disabled in WHMCS and the domain name has expired.
transfer	Automatically update the transfer status for incoming transfers.
undoplanneddelete	Undo planned deletion of a domain at SIDN if autorenew is enabled again in WHMCS.
updatecontactontransfer	After transfer update contact to the WHMCS client profile. Requires the transfer option.
updatenamserverontransfer	After transfer update nameservers to the one in the order (if set). Requires the transfer option.
version	Display version number for the module and exit.

Example of cronjobs:

```
15 0 * * * /usr/bin/php /home/whmcsdev/www/modules/registrars/sidn/sidn_sync.php remove dnssecbydef dnssec noverbose
```

```
30 * * * * /usr/bin/php /home/whmcsdev/www/modules/registrars/sidn/sidn_sync.php poll pollcancel noverbose
```

```
45 * * * * /usr/bin/php /home/whmcsdev/www/modules/registrars/sidn/sidn_sync.php transfer noverbose
```

10. Product development

Our goal is to deliver the best possible product, to help us to improve this product. Did you find a bug, or do you have a feature request or other comment regarding this product, please feel free to contact us and let us know: info@tools4isp.com (please include your module version number and WHMCS version number).

10.1 Changes and fix history

Feature/Bugfix description	Status	Ver.
Client side DNS errors related to the use of php tags in the templates	Added	3.2
Make management possible again	Fixed	3.2
PHP 8.1 support	Added	3.1
Increase time out to 3000 sec	Added	3.1
Multiple bug fixes	Fixed	3.1
Reduce errors	Fixed	3.1
Compare SIDN	Added	3.0
Planned delete	Added	3.0
Update planned delete	Added	3.0
Update contact after transfer	Added	3.0
Update nameservers after transfer	Added	3.0
PHP 8 support	Added	3.0
Replace nameserver after transfer	Fixed	3.0
Modify contact after transfer	Fixed	3.0
Multiple bug fixes	Fixed	2.16
Multiple improvements	Fixed	2.16
Multiple bug fixes	Fixed	2.15
Do not start EPP connection to get version information	Fixed	2.14
If countries.json (custom WHMCS file) is missing some content look in dist.countries.json (standard WHMCS file)	Fixed	2.14
Move as much code as possible for the sync scripts to 1 file (where not already done)	Added	2.14
If we are processing incoming transfers only don't check all domains at the registry/registrar	Added	2.14
Reduce EPP actions for sync scripts where possible (big performance improvement)	Added	2.14
More information about the modules in the admin of WHMCS	Added	2.14
(RRP) Remove Set renewal mode to EXPIREAUCTION	Added	2.14
Solutedns DNSsec support removed (you can add it to the dnssec table to get it working)	Fixed	2.13
Option for cron: fixwrongdates (set dates to expiration date registry if in WHMCS it is set to 0000-00-00)	Added	2.13

Code improved	Fixed	2.13
Multiple bugfixes	Fixed	2.13
Poll messages are now stored in database	Added	2.13
Option for cron: version (display version number, it also displays the link to the manual and exit)	Added	2.13
New SIDN synchronization options	Added	2.12
Register commands now only show buttons for current domain status	Added	2.12
Account field in PowerDNS can now be set	Added	2.12
Option to lock handles	Added	2.12
Force email address in WHOIS	Added	2.12
Automatically download .csv files from SIDN with domain names	Added	2.12
Log EEP requests to file	Added	2.12
Support for WHMCS 8.0	Added	2.12
Rewritten User guide	Added	2.12
Bug related to saving DNS records solved	Fixed	2.12
Multiple improvements in source code	Fixed	2.12
Multiple improvements in source code	Fixed	2.11
Issue failure date when lost connection	Fixed	2.10
Added several options cron	Added	2.10
Process transfer(out) for Multiple WHMCS installations and 1 SIDN account	Added	2.10
Various layout parts improved	Fixed	2.9
DNSSec key input problem fixed	Fixed	2.9
Userguide expanded with additional information functions	Added	2.9
Modify domain contact details name fields (natural person and organization) merged	Fixed	2.9
Contact details phone number format issue solved	Fixed	2.8
Contact details firstname, lastname, company issue solved	Fixed	2.8
Issue adding reseller information solved	Fixed	2.8
Language file modified	Fixed	2.8
Ioncube version issues	Fixed	2.8
DNSsec table issue	Fixed	2.8
Support for PHP 7.6.1	Fixed	2.8
Extra field added for registration .es extension	Added	2.7
Ioncube version conflict	Fixed	2.7
DNSsec tables preparation	Fixed	2.7
Support for PHP 7.2	Fixed	2.6
Licensing fix	Fixed	2.6
Bugfixes DNS support	Fixed	2.5
Remove unnecessary renew button	Fixed	2.5

House number fix	Fixed	2.4
Max connection fix	Fixed	2.2
DNS default language added	Fixed	2.2
DNS template improved	Fixed	2.2
Renew period fix, add 1 year registrar and WHMCS renewal field	Fixed	2.2
Support for WHMCS version 7	Added	2.1
Error handling	Fixed	2.1
Config settings merged, all main configuration now configured by tools4ISP module	Added	2.0
DNSsec status now in real-time	Added	2.0
Rebuild refresh content to get current data	Added	2.0
Phone number country code list	Added	2.0
Major error handlings added	Added	2.0
Modify contact handle doesn't work properly	Fixed	2.0
Phone number county code entry bug	Fixed	2.0
Config page shows default values	Fixed	2.0
Error on page Reseller page in clientarea	Fixed	2.0
DNSsec selection field always off (even when it's on)	Fixed	2.0
Changing DNSsettings does not work always	Fixed	1.15
Some screen missing layout or show white screen	Fixed	1.15
Unable to view transferred away domain within WHMCS	Fixed	1.15
Contact data issue registrant and tech and fixed	Fixed	1.15
Get from quarantine problem fixed	Fixed	1.15
Caching problem fixed, no need to refresh after a update	Fixed	1.15
License problem fixed when license is expired	Fixed	1.15
Debug option has been added with information by mail	Added	1.14
Debug option with info on screen	Added	1.14
Added Cache (option to change the cache period). Cache based on a session is canceled	Added	1.14
Clear message when it comes to a license error (one session as admin are required to see the message)	Added	1.14
Adding DS record in standard list of supported types of records	Added	1.14
Domain name registration on company name instead of contact person name	Fixed	1.14
New name servers are now registered with SIDN if required	Fixed	1.14
